Sulzer Pumps
for Alumina and Aluminum Applications
Our Experience Dedicated to Your Success

The global metal processing industry has been undergoing significant changes over the past years and now finds itself in a new era.

**Go beyond the limits**
A shortage of skilled workers coupled with stricter environmental regulations have prompted a change in the market dynamics; the trend is now towards remote metals operations where more reliable pumps and pumping equipment, that are less labor intensive, are required.
In such a complex market, only a few manufacturers manage to understand the challenges faced in metal pumping applications. Sulzer pushes technologies to their limits and beyond in order to develop state-of-the-art pumps and agitators, capable of meeting even the most demanding needs of customers.

**Designed to withstand highly abrasive environments**
Reliability is crucial in metal industry. Due to processing, erosion, corrosion and lack of regular maintenance, pump efficiency and reliability are continuously challenged. Sulzer is well aware of the harsh conditions and develops equipment engineered to a high standard. Its experience and product knowhow are dedicated to providing sustainable and reliable solutions, selecting the most appropriate product and material, to sustain the changing environment in metal industry.

**More than a pump supplier**
Sulzer supplies a complete pumping and agitation packages for metal processing industry, from clear liquid to light slurry process to submersible and dewatering pumps including full services and support.
By working together with Sulzer, customers benefit from:
- Increased time between failures with extended run times on equipment
- Lower energy consumption due to high efficiencies and optimum selections
- Reduced capital costs and increased profitability with current products, optimizing interchangeability between common parts
- Reduced downtime costs due to improved pump reliability
- Cutting edge technologies from a pump supplier with a strong engineering heritage and a comprehensive local support network
Alumina Refining

**Digestion of bauxite**
Grinding and desilication, digestion and leaching

AHLSTAR W/WPT wear and corrosion resistant process pumps
- Wear resistant, open impeller
- Wear resistant chromium iron material ASTM A532 IIIA (5B), hardness value up to 600 HB
- Double mechanical shaft seal
- Hydraulic design prevents build up of slurry in the pump casing and seal area

**Precipitation of alumina hydrate**
Carbonization and decomposition

AHLSTAR W/WPT wear and corrosion resistant process pumps
- Wear resistant, open impeller
- Wear resistant chromium iron material ASTM A532 IIIA (5B), hardness value up to 600 HB
- Double mechanical shaft seal
- Hydraulic design prevents build up of slurry in the pump casing and seal area

**Clarification**
Separation of red mud and desiliconization

AHLSTAR W/WPT wear and corrosion resistant process pumps
- Wear resistant, open impeller
- Wear resistant chromium iron material ASTM A532 IIIA (5B), hardness value up to 600 HB
- Double mechanical shaft seal
- Hydraulic design prevents build up of slurry in the pump casing and seal area

**Evaporation**

AHLSTAR A/APT process pumps or CPT chemical process pumps
- Closed or open, high efficiency and low NPSHr impeller
- Corrosion and wear resistant stainless steel material ASTM A890 3A (41)
- Double mechanical seal
Aluminum Smelters

Granulated waters with solid particles
AHLSTAR W/WPT wear and corrosion resistant process pumps
- Wear resistant, open impeller
- Wear resistant chrome iron material ASTM A532 IIIA (5B), hardness value up to 600 HB
- Double mechanical shaft seal or unique dynamic shaft seal
- Hydraulic design prevents build up of slurry in the pump casing and seal area

Cooling waters
AHLSTAR process pumps or CPT chemical process pumps
- Closed or open, high efficiency and low NPSHr impeller
- Cast iron material A48 CL 40B (53)
- Unique dynamic shaft seal eliminating the need for mechanical seals

Collected floor liquids
AHLSTAR self priming or degassing process pumps or wear resistant self priming process pumps
- Open, high efficiency and low NPSHr impeller
- Corrosion and wear resistant stainless steel material ASTM A890 3A (41)
- Integrated vacuum structure
- Self priming pump eliminating the need for expensive and maintenance required vertical pump

Other Utilities

Water transport
The SJP vertical wet pit pumps are primarily used in water lift, transfer and cooling water applications. ZPP, Z22 and SMD single stage double suction pumps are designed for applications including cooling and circulating water pumping. AHLSTAR NVP/NVT non-clogging vertical pumps are intended for all kinds of hard applications with wastewater, slurries or waste stock.

Boiler feed
The MBN high pressure multistage pumps are used for pumping clean or slightly contaminated liquids in high pressure applications in various industries. The M series of ring section multistage pumps consist of MB, MC, MD and ME ranges. A wide range of common hydraulic components and bearing assemblies are used within the 4 standard pressure ranges.

Submersible dewatering pumps
The submersible dewatering pumps XJ and XJS are ideal for pumping dirty water or sludge in harsh mining environment. Pumps are built in with Aqua-Tronic intelligence to ensure safe and smart operation.

High head mine dewatering
The HPH/HPL multistage pumps are specifically designed for mine dewatering applications. Their robust construction is designed to combat the highly abrasive environment in which they operate.
